FOOD PROCESSING CONTAINERS

FOOD INDUSTRY PACKAGING ESSENTIALS

RTP offers a variety of solid wall plastic bins, intermediate bulk containers, and totes that are optimal for food processing operations. Every product is manufactured with FDA-approved materials, making them 100% safe to handle and process food products. Plastic containers are made of premium virgin polypropylene, a type of plastic known for its flexibility, strength, and stability. This non-porous polypropylene prevents any water or chemical damage to the container, while keeping the contents of the container safe from contaminants as well. Our food processing containers are exceptionally easy to clean and simple to maintain.

INTERMEDIATE BULK CONTAINERS

Intermediate bulk containers (IBCs), totes, and tanks are optimal for storing and transporting goods such as liquids, solvents, or granulate materials (food, chemicals, pharmaceuticals, etc.) in large quantities. These industrial food packaging containers are stackable for saving large amounts of space. These high capacity IBCs are low-cost solutions for processing, shipping, and storing products. These intermediate bulk tanks are available with liners for improved container and product safety and sanitation. The capacity of an IBC bin ranges from 200 to 600 gallons depending on its material and size, with the most favored size being the 275 gallon container. Types of IBCs include collapsible or fixed wall, IBC totes, stainless steel IBC tanks, and carbon steel IBC tanks. Here at **RTP** we also offer various IBC Tote accessories such as valves, funnels, mixers, nozzle kits, and more.

FOOD PROCESSING BINS

RTP's bulk food processing bins are used to keep the contents of the bin safe during food processing and manufacturing. These multipurpose food containers are ideal for storage and transportation of dry, granular, or liquid products. Bulk processing containers are ideal for food and beverage applications because of their non-porous surfaces, cleanliness, and ergonomic design for easy handling. They offer rigid walls that prevent warping during storage and distribution. Food-safe reusable bulk containers come in FDA approved material.
