Reusable Moving Totes

The stackable dolly system with reusable moving boxes helps companies significantly reduce their moving costs. Using reusable packaging significantly reduces impacts to people and planet by having a longer and more efficient useful life which eliminates the use of cardboard boxes. One of the biggest advantages of reusable boxes is that they're easily stackable. Whereas cardboard boxes stack unevenly. Reusable moving totes are so reliable that when the **RTP** team moved locations, we ourselves used plastic attached lid boxes to make our moving process super efficient and time-saving.
