

## Automotive Manufacturing & Distribution Reusable Containers and Pallets

## Automotive Warehouse Storage Needs

**Automotive companies that** have complex operations need specific requirements in containers that only plastic containers can meet. If you need containers to help secure your automotive production in your warehouse or industrial facility, or you require automotive parts to be in transport, a plastic reusable automotive container can easily fit this description. They're easily handled, via forklift or robotic automation as well, for loading and unloading.

Our reusable industrial containers that save large amounts of storage space without creating a hazard that wooden containers would. The automotive industry uses reusable containers for everything from storing car parts and mechanic tools to completed vehicle pieces. Reliable plastic automotive containers create more organization and ensure a hazard-free work environment.

Triple wall corrugated plastic or cardboard sleeve-pack containers come in all sorts of different sizes and they're perfect for automotive equipment of all varieties. Sleeve-pack containers like these are generally made from eco-friendly, recycled materials and can be folded down when they're not in use.

Industrial plastic sleeve-pack containers are more affordable and effective than metal, stack well, and collapse quick. From industrial conveyor containers to warehouse storage containers with lids, customize your containers to fit your needs.

## **Automotive Industry**

The automotive industry uses reusable containers for everything from storing car parts and mechanic tools to completed vehicle pieces. Reliable plastic automotive containers create more organization and ensure a hazard-free work environment. If you need containers to help secure your automotive production in your warehouse or industrial facility, or you require automotive parts to be in transport, a plastic reusable automotive container can easily fit this description. They're easily handled, via forklift or robotic automation, for loading and unloading. Ergonomically correct in design, the design of reusable storage containers ensure they can be properly stored while also protecting the inventory inside. Metal storage containers are also available to accommodate certain automotive tools or equipment.
