COLLAPSIBLE BULK CONTAINER WITH BOTTOM DISCHARGE

48 X 40 X 48 – COLLAPSIBLE BULK CONTAINER WITH BOTTOM DISCHARGE

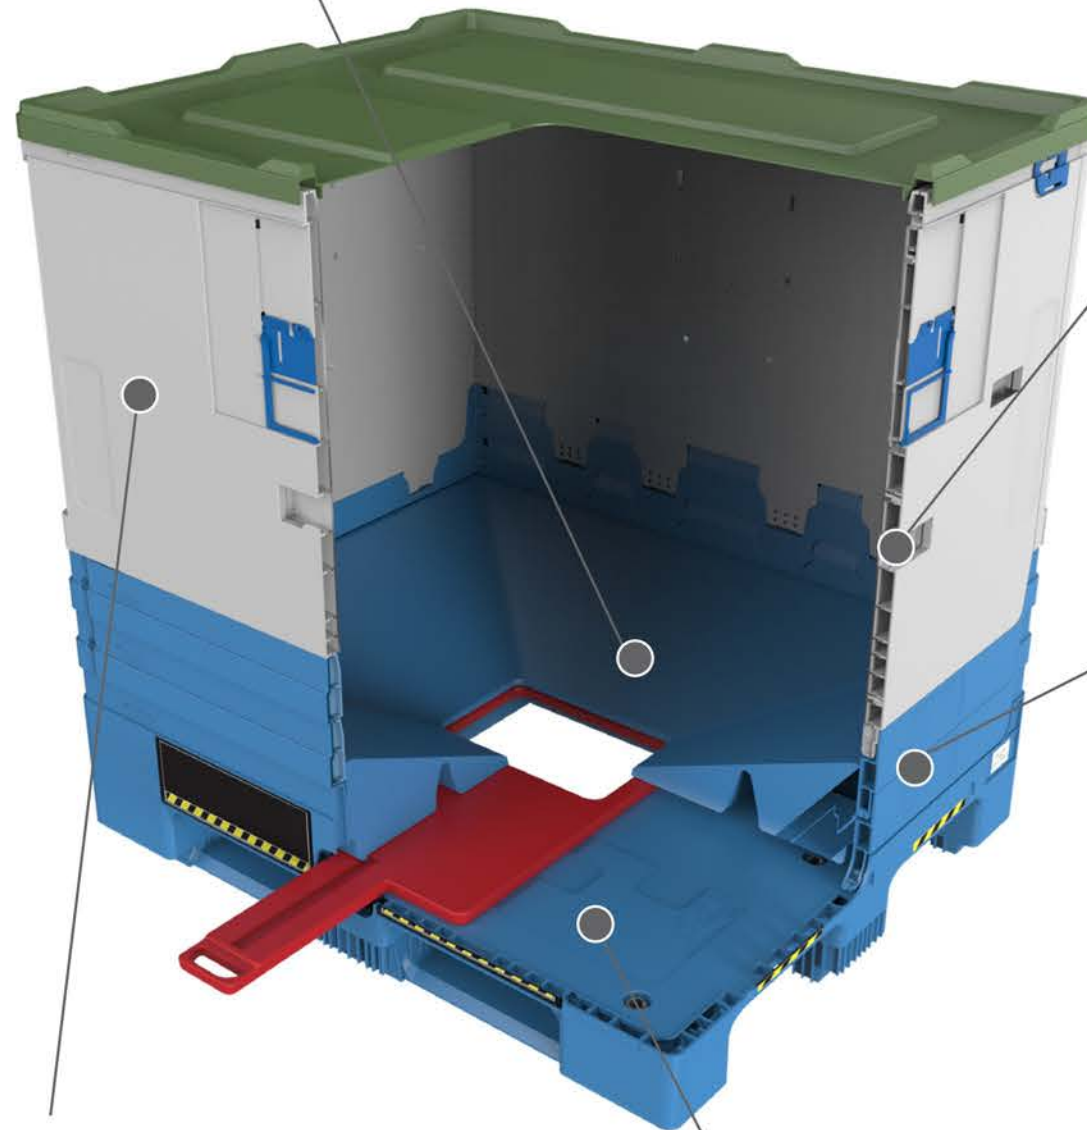

THE IDEAL HOPPER SOLUTION FOR INDUSTRIES WITH STRINGENT HYGIENE STANDARDS

Complete control over parts flow: the wide hopper base opening (13.8 × 8.7 in) allows all types of parts (including caps, closures, and accessories) to be unloaded in evenly dispensed volumes with fully controlled quantities.

AN INNOVATIVE, ECO-FRIENDLY SOLUTION FOR DISPENSING BULK SMALL PARTS

A fully reusable, foldable large container with a specialized hopper base that eliminates packaging waste and removes the need for liners, separate pallet bases, or cardboard frames.

EASY, ERGONOMIC HANDLING

The container can be folded and set up by a single operator, saving time and labor. It empties easily with any tipping device and integrates with most automated conveying systems, making it ideal for high-speed, roboticized processing in the food, pharmaceutical, and cosmetics industries.

OPTIMIZED LOGISTICS

The hopper bottom container fits within its standard footprint of 47.2 × 39.4 in. With a folding ratio of up to 56%, it saves storage space when empty and enables efficient logistics with parts suppliers using standard trucks.

CUSTOMIZATION & TRACKING

Features large recessed areas on all four walls for barcode labels and marking plates, ideal for displaying customer logos and boosting brand visibility. It can also be fitted with SmartLink® technology for fully trackable and traceable fleet management.

OPTIMUM PERFORMANCE

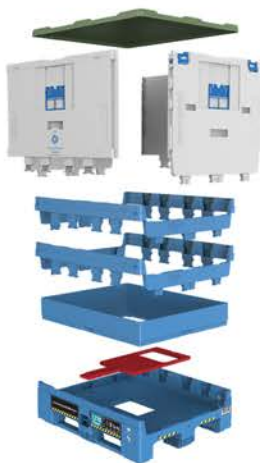

Containers can be stored in tall stacks, even when fully loaded, minimizing storage costs and ensuring continuity of supply.

Certified for food contact, the container is easy to maintain and clean, with smooth, sloped surfaces that accelerate water drainage. An optional lid provides maximum protection for the contents.

ADDED FEATURES

Maximized Capacity and Hygienic Design: Provides 10% more usable volume than most competing designs. Its fully smooth double-wall construction makes it easy to clean and perfectly suited for industries with strict hygiene standards.

Maximized Capacity and Hygienic Design: Provides 10% more usable volume than most competing designs. Its fully smooth double-wall construction makes it easy to clean and perfectly suited for industries with strict hygiene standards.
